Harlequin ducks are considered by most to be the prettiest of the sea ducks. Their preferred nesting habitats are along fast moving rivers; in winter, they frequent bays and estuaries along the coast.

The diet of the harlequin duck is 98 percent animal matter. The harlequin enjoys crustaceans, mollusks, insects, and fish.

Harlequins are not considered an important game bird. The species is fairly rare, and its habitats are not easily accessible by hunters.

Swan, Honorable Mention
By Valida Holder, age 17, Art teacher: Michael Nesbit
Quincy Jr. / Sr. High School, Quincy
